Jumpax Acoustical Underlayment Installed in Bacon Street Lofts, Burlington, Vermont

Burlington, Vermont: August 10, 2011 – Sound Seal, a leading manufacturer of commercial and architectural acoustic noise control products announced today that the Bacon Street Lofts, a new apartment building in Burlington, Vermont, is specifying / installing the Jumpax Underlayment System as the preferred underlayment within the 32,000 sq. ft. building.

The Bacon Street Lofts consists of timber frame construction that required an acoustical underlayment to reduce the transfer of structure-borne noise from one floor to another. Since minimum floor preparation is required in the installation of Jumpax, it proved to be the perfect structure-borne acoustical underlayment system for this project.

Jumpax acoustical underlayment is a sound reducing, free floating, dry leveling, fast track floor preparation system.

Korey Santor, the owner of Floor Coverings International of Burlington, Vermont had this to say about the Jumpax product, "We at Floor Coverings International believe in using the best materials for our customers. After years of using traditional underlayment we have moved to the best underlayment around, Jumpax. Jumpax provides acoustical protection, comfortable feel and ease of installation. That is why we can provide a Lifetime Labor Warranty when using Jumpax with our Karndean luxury vinyl."

About Sound Seal

Sound Seal is a leading manufacturer of commercial and architectural acoustic noise control products offering the widest product selection in the soundproofing industry. Sound Seal has stayed true to this vision and consists of three product lines: The Industrial Division which deals with in-plant noise control, the Architectural Division which handles interiors and the Impacta Flooring Division which deals with floor underlayments.
