

Sound Seal Lag Tape

Sound Seal lag tape is a UV resistant polypropylene tape coated with an Acrylic adhesive and can be used in temperatures ranging from -35°F to 260°F. This tape will not delaminate over time and excels in high heat and humidity conditions.

Applications:

Typically used to secure Sound Seal's pipe and duct wraps both to itself and to adjacent pieces. Note: Use for an extended period at either higher or lower than recommended temperatures may result in tape failure.

Description:

Material:	polypropylene tape coated with an Acrylic adhesive
Color:	Silver
Nominal Width	4 inches
Roll Length:	200 feet
Thickness:	3.0 mils

Minimum Application

Temp: -35°F

Maximum Temp:

Continuous: 260°F

Intermittent: 300°F

Instructions for use:

- 1) Remove dust, grease, moisture and other foreign matter from the application surface
- 2) Secure the lagging material in place by overlap the lagging onto itself by 2-3", pull snug and taping the seam.
- 3) Secure the next piece by overlapping the first by 2" and taping the seam.
