

Sound Seal Introduces Sound Quality® Polyester Acoustical Board (PAB) and Theater Board

AGAWAM, Mass. – May 1, 2019 – Sound Seal, a leading manufacturer of noise control products serving the industrial, architectural, commercial and construction industries, announced today the introduction of Sound Quality® Polyester Acoustical Board (PAB) and Theater Board. These two new acoustical wall panel products are now available as part of our Sound Quality portfolio.

Polyester Acoustical Board (PAB) offers great flexibility in acoustical applications and installations, working as a sound absorption product for wall ceiling and duct applications. It is an environmentally friendly, polyester acoustical panel developed for building interiors and exteriors. The product works well for either retrofit or new construction applications.

Sound Quality® PAB Board

Sound Quality® Theater Board

Theater Board is a sound absorptive board that provides excellent acoustic performance by reducing reverberation. Theater Board tiles are made from lightweight, black-dyed acoustic fiberglass board and finished with a matte black fiberglass fabric. Theater Board is an affordable solution to building acoustic ceilings in any residential or commercial space where reverberation or reflected noise is an issue.

“We are very excited to continue to expand on our acoustical panel offering,” said Dave Ingersoll, Business Development Manager for Sound Seal. “There are instances where something other than a fabric finished panel is required. With these two new products, we are able to offer environmentally friendly and cost effective alternatives when they are needed.”
